PRACTICES

- Domain-Driven Design
- API Contract Design
- Observability & MTTR
- Job Orchestration
- Caching Patterns
- Performance Budgets
- Incident Postmortems

PROFILE

Senior Full-Stack Engineer with **5 years of commercial experience** delivering production-grade systems. Built and stabilized media-processing pipelines, subscription-based products, bilingual marketing platforms, and DeFi portals with wallet authentication. Strong focus on **API reliability, observability, controlled rollout practices,** and keeping delivery velocity high without sacrificing stability.

WORK EXPERIENCE

Full-Stack Engineer | 01/2024 - *present*

Blockchain-powered Product Journey Platform

– Owned end-to-end delivery for a blockchain-powered product journey platform focused on product provenance, sustainability claims, and transparent supply-chain visibility.
– Built **core admin workflows** for company/product management, subscription access, product scanning, approval flows, campaign management, and token-based user rewards.
– Developed public product journey pages with **multilingual support**, consumer-facing product details, and map-based visualization of origin, production, and delivery stages.
– Integrated Web3 flows for blockchain-backed product records, including smart contract interactions, transaction creation, approval handling, and reliable state synchronization.
– Built **AI and automation features** using OpenAI API, scheduled jobs, and X/Twitter /Telegram integrations for chatbot responses, generated posts, and community engagement.
– Established deployment workflows with Docker, GitHub Actions, and AWS services, supporting fast product iteration while keeping production releases controlled and reliable.

Backend Engineer | 11/2022 - 12/2023

Gentler Streak - *FitnessTrackerwith Readiness Guidance*

– Owned backend services for **account lifecycle, sync, and long-term activity history**, optimised for mobile connectivity constraints.

LANGUAGES

- Ukrainian - Native
- English - B2 Upper-Int.

EDUCATION

Bachelor of Software Engineering 2016 - 2020

Lviv Polytechnic National University

CONTACTS

Telegram

LinkedIn

Email

– Designed aggregation pipelines for timelines and readiness summaries, maintaining data correctness across **months/years of user history**.

– Built subscription/entitlement pathways with **audit-friendly state transitions** and backwards-compatibility safety rails to prevent revenue-impacting regressions.

– Introduced rate limiting and defensive validation on core endpoints - prevented abuse patterns and protected stability during traffic spikes.

React Native Node.js NestJS TypeScript PostgreSQL AWS HealthKit CI/CD

Full-Stack Engineer | 01/2022 - 09/2023

Spicenet Portal - *Web3 Ecosystem Portal*

– Architected portal with **explicit domain boundaries** (quests, progression, rewards, leaderboard), enabling rapid campaign iteration without destabilising core flows.

– Implemented **wallet-based authentication** and message-signing flows with consistent session behaviour across wallet providers.

– Built **anti-abuse and data-integrity guardrails**: idempotent reward claims, server-side verification, replay-protection - eliminated fraudulent claim attempts entirely.

– Designed cache-aware read paths for high-churn views (leaderboards, progress).

– Established observability hooks for key funnels (quest completion, wallet connect, claim success), enabling data-driven prioritisation.

React TypeScript Node.js PostgreSQL WebSockets Docker Web3 RPC CI/CD

Full-Stack Engineer | 06/2020 - 01/2022

Tella - *Screen Recording & Editing SaaS*

– Owned backend delivery for **core media workflows** (asset ingest, processing, conversion, publish-readiness), ensuring correctness under large payloads.

– Designed and standardized **API contracts** powering editor/publishing surfaces, keeping client behavior predictable across fast product iteration.

– Hardened processing paths by tightening failure handling, retries, and asset consistency guarantees

– Introduced **baseline observability** (structured logging, alerting) on the most failure-prone media paths, cutting MTTR from ~2h to **<30 min.**

– Established rollout discipline (small batches, instrumentation-driven validation) for pipeline-impacting changes - **zero regressions** over 8 releases.
